

# Senior Software Developer

---

## About OSG

OSG develops software products for sleep analysis (SleepRT) and brain activity (BrainRT) in hospitals. By combining years of experience with continuous innovation, we make a difference in Clinical Neurophysiology and Sleep research. OSG is proud of its state-of-the-art software solutions, seamless integration in hospital infrastructure and guaranteed quality.

Our solutions are being used in top university hospitals throughout the Benelux and worldwide through our distributors. Check our website [www.osg.be](http://www.osg.be) for more info.

## Online platform development

OSG is developing a state of the art online platform for automatic analysis of electrophysiological signals related to sleep disorders. The ultimate goal of this development is to offer a fully validated platform for sleep centers worldwide to analyze their signals automatically.

## Job description

We are currently looking for a senior software developer to design the backbone of the online platform. You will work in a team of software engineers and coordinate the development of the platform and its components (backbone, security, user interface, performance).

Required skills/languages: Java, C++/C# and/or Python
